Setup a local python server (Python 3)

```
python -m http.server {port} --directory {directory}
```

Sets up a python server on the specified port with the specified directory as the web root. If the --directory flag is not specified, then the current directory will be used. Files within this directory can be accessed. Note that the --directory flag is only supported from python 3.7

Bind to specific address (Python 3)

```
python -m http.server {port} --bind {interfaceIP}
```

Sets up a python server on the specified port and binds it to the specified IPv4 or IPv6 interface. Note that the --bind flag is only supported from version 3.4 (IPv4) and 3.8 (IPv6)

Setup a local python server (Python 2)

```
python -m SimpleHTTPServer {port}
```

Sets up a python server on the specified port
